

Greenlots Applauds Obama/Trudeau Push for Electric Vehicles

Greenlots applauds efforts by President Obama and Prime Minister Trudeau for climate change strategy focus on electric vehicles and battery technologies

SAN FRANCISCO, March 10, 2016 -- Greenlots praises the initiative of President Obama and Prime Minister Trudeau to advance a North American climate change strategy. Their recognition of the economic opportunities for clean, sustainable growth and a renewed commitment to address climate change is applauded by Greenlots.

Greenlots, a global provider of open standards-based technology solutions for electric vehicles, is already working with Canadian partners to establish a network of electric charging stations in British Columbia and Ontario, Canada.

“The leadership shown by President Obama and Prime Minister Trudeau paves the way for expanding cross-border partnerships to improve our North American environment,” said Greenlots CEO Brett Hauser. “We are already working with BC Hydro, growing the network of DC fast charging stations hosted by British Columbia municipalities, a program championed by BC Premier Clark. And, we have submitted a comprehensive proposal in concert with a number of Canadian companies in response to Premier Wynne’s call for building an EV charging network across Ontario, “ added Mr. Hauser.

Greenlots is committed to open standards and open driver access for EV charging infrastructure. Greenlots has operated in Canada since 2012.

About Greenlots:

Greenlots is a global provider of open standards-based distributed energy resource solutions. Its award-winning SKY Smart Charging™ charge management platform bridges electric mobility, demand side management, and behind-the-meter energy storage markets for the built environment. Greenlots operates the largest open DC Fast Charging network in North America, and provides utilities the ability to remotely control grid loads through smart charging, demand response, and energy storage initiatives.
